

## **Terms of Agreement for Authors requesting APCs from the OpenAIRE2020 FP7 post-grant gold Open Access Pilot fund**

By applying for funding for an Open Access publication via this service, you abide by the following terms of agreement:

### Technical requirements

1. The information you have provided on the publication and the associated payment is complete and correct to the best of your knowledge.
2. The funded publication will be made available under an open content license, preferably Creative Commons CC-BY or CC-BY-SA. As an exception, a CC-BY-NC license will be acceptable for monographs during the first year.
3. The funded publication will be assigned a Digital Object Identifier (DOI) or equivalent persistent identifier as early as possible in the publication process, ideally when a publication is accepted. It must be assigned and provided to OpenAIRE before the invoice gets paid.
4. The published version of the funded publication must be made available by the publisher in PDF/A format. Additional formats that allow better use of text and data mining techniques are strongly encouraged such as XML (see <http://www.biomedcentral.com/about/datamining> for an example) or HTML.

### Depositing in an Open Access Repository

6. The final publisher copy of the publication (i.e., PDF/A file or their TDM-able equivalents) must be deposited in an OpenAIRE-compliant repository, or Zenodo - <https://zenodo.org>, with a CC-BY licence. If this deposit is not carried out by the publisher or your institution, you need to take care of doing the deposition yourself.
7. The licensing information must be included in the metadata for the deposited item.

### Acknowledgment

8. The funded publication must acknowledge the original FP7 project according to FP7 model grant agreement rules. Additional acknowledgement information on the specific Open Access funding can be added. The acknowledgment must be included in the bibliographic metadata of the deposited publication whenever possible.

### Supplementary or related material and data

9. The funded publication must include a statement where applicable on how underlying research materials, such as research data, samples or models, can be accessed.

### Fair Use of the Pilot

10. Due to the limited number of publications this Gold OA Pilot will fund per project, in case you are not the Principal Investigator (PI) of the FP7 project on behalf of which you are

applying for funding, you must make sure the project PI is aware of this funding request in advance. In case you are the FP7 PI, you commit to disseminate this funding opportunity to the remaining project partners and to keep them informed of the number of project Open Access publications still eligible to be funded by the Gold OA Pilot.

11. You confirm that OpenAIRE has not been involved in any way in the choice of journal and publisher for the publication for which you are requesting this funding.
